The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/888,222

Applicant(s)

PUN

Examiner

Angela A. Armstrong

Art Unit

2626

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 March 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-40 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-40 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Pre-Appeal Brief Request, filed March 5, 2007, with respect to the rejection(s) of claim(s) 1-40 under 35 USC 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ho (US Patent No. 6,307,541).

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakayama et al (US Patent No. 4,531,119) in view of Ho et al (US Patent No. 6,307,541) and Grover (US Patent No. 5,818,437).

4. Regarding claim 1, Nakayama discloses a method for generating Japanese text in response to signals generated by a user (col. 1, line 63 to col. 2, line 5) comprising; determining that one or more predicted words include any syllable of each of the one or more sets of syllables (col. 2, lines 51-62); presenting the one or more predicted words to the user for selection (col. 2, lines 51-62).

Nakayama fails to specifically teach that the signals generated by the user specifies one or more phonetic symbol categories each of which includes one or more syllables and at least one of which includes two or more syllables. Ho discloses a method and system for inputting

Art Unit: 2626

Chinese-characters through virtual keyboards to data processor, and provides for receiving one or more signals generated by the user which specify one or more phonetic symbol categories which include one or more syllables and at least one of which includes two or more syllables (col. 10, line 20 to col. 18, line 29; col. 16, line 13 to col. 17, line 30).

Therefore, it would have been obvious to one of ordinary skill at the time of the invention to modify the system of Nakayama to provide for a text input method using a reduced set of keys, as suggested by Ho, for the purpose of producing a more easily readable keyboard displayed on a display device.

Nakayama fails to specifically teach one or more of predicted words or phrases include at least one syllable beyond the one or more syllables of the phonetic symbol categories specified by the signals generated by the user. However, anticipating and providing complete words/phrases to a user after the user has entered a small number of keystrokes to alleviate the user having to type in the complete word was well known in the art. Grover discloses a reduced keyboard system, which performs a "look ahead" function so as to anticipate and provide the user with predicted words after the user has typed less than all the letters of a desired word (col. 12, lines 1-9). It would have been obvious to one of ordinary skill at the time of the invention to modify the system of Nakayama to implement a look ahead function so as to anticipate and provide the user with predicted words after the user has typed less than all the letters of a desired word, as suggested by Grover, for the purpose of saving the user time in having to type the all the letters of frequently used or key vocabulary words.

Art Unit: 2626

Regarding claim 2, the combination of Nakayama, Ho, and Grover discloses the one or more collections are each associated with a respective consonant (col. 10, line 20 to col. 18, line 29; col. 16, line 13 to col. 17, line 30).

Regarding claim 3, the combination of Nakayama, Ho, and Grover discloses a vowel one of the one or more collections is associated with a null (col. 10, line 20 to col. 18, line 29; col. 16, line 13 to col. 17, line 30).

Regarding claims 4 and 29, the combination of Nakayama, Ho, and Grover discloses one or more collections correspond to a fifty sounds table (col. 10, line 20 to col. 18, line 29; col. 16, line 13 to col. 17, line 30).

Regarding claims 5-6, the combination of Nakayama, Ho, and Grover discloses the signals generated by the user specify each of the one or more collections in response to a corresponding single key press (col. 2, line 51 to col. 3, line 64).

Regarding claims 7-8 and 30-32, the combination of Nakayama, Ho, and Grover discloses determining the kanji representation of each of the one or more predicted words and presenting the one or more predicted words comprises presenting the kanji representation of each of the one or more predicted words (col. 2, lines 51-62).

Regarding claims 25-26 and 28, Nakayama does not disclose the system for generating text is implemented via a wireless telephone or text messaging device. Ho discloses a method and system for inputting characters through virtual keyboards from a mobile phone (Figures 2-6). It would have been obvious to one of ordinary skill at the time of the invention to modify the system of Nakayama for implementation in a wireless phone or text messaging device, as

Art Unit: 2626

suggested by Ho, for the purpose of providing inputting of characters at a high speed in a convenient and efficient manner to mobile and wireless users.

Regarding claim 27, the combination of Nakayama, Ho, and Grover discloses implementation on a computer (figure 1).

Regarding claims 9-16, 17-24, and 33-40; the claims are similar in scope and content to claims 1-8 and 29-32 rejected above, and are therefore rejected under similar rationale.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
